

SurpassPRO

FUNGICIDE

SurpassPRO is suitable for tank mixing with a full range of systemic fungicides, liquid fertilisers and some iron formulations.

Like all Iprodione formulations, **SurpassPRO** should not be used in a spray tank with extremely acidic products and no acid buffering is required prior to application.

SurpassPRO is suitable for tank mixing with:

- Headland 'Throttle' fungicide
- Liquid Turf Hardener
- Liquid Turf Hardener + Turfite + Seamac Proturf
- TeMag HPE
- Headland Soluble Iron

Note - **SurpassPRO** is not suitable for tank mixing with Seamac Proturf or Liquid Turf Hardener + Seamac Proturf tank mix, except in very hard water areas.

For all your tank mix enquiries, please contact Headland Amenity prior to application.

A contact fungicide for use against Fusarium Patch and Red Thread in amenity turf.

SurpassPRO FUNGICIDE

A contact fungicide for use against Fusarium Patch and Red Thread in amenity turf.

SurpassPRO is a new liquid fungicide containing Iprodione, with both curative and preventative activity, for the control of Fusarium Patch and Red Thread on amenity turf. **SurpassPRO** can also be mixed with Headland's 'Throttle' fungicide as well as a range of Headland's plant protection products, to give cost effective, programmed disease control.

- Contact action against *Microdichium nivale* (Fusarium Patch) and *Laetisaria fuciformis* (Red Thread).
- Liquid formulation of Iprodione provides both preventative and curative control.
- Can be used in Headland's disease management programme.
- Tank mixable with 'Throttle' fungicide and Headland's 20/20/30* combination.
- First choice for disease control in cooler, slower growing months of the year.
- Approved for Knapsack application.
- Backed up by Headland's first class technical service.

* Headland's 20/20/30 tank mix - 20L Turfite + 20L Liquid Turf Hardener + 30L Seamac Proturf with 10L **SurpassPRO** in 400L water.

Where to use SurpassPRO

Surpass is approved for use on the following areas;
 Golf greens, tees and patch treatment of up to 5% of fairways.
 Bowling greens, cricket pitches (excluding outfields), lawn tennis courts and professional grounds or stadiums.
 Commercial and residential lawns up to 200 m² and patch treatments of up to 5% of estate lawns up to 5000m² (i.e. 250 m²).

How to use SurpassPRO

Curative applications of **SurpassPRO** should be applied as soon as the first signs of disease appear and repeated as necessary at intervals of 1 month or greater.

Preventative applications can be tank mixed with a suitable systemic fungicide and should be applied prior to disease outbreak during periods of high or predicted disease pressure.

Always apply after cutting and do not mow for at least 24 hours. **SurpassPRO** can be applied all year round for the control of turf diseases and comes into its own when weather conditions lead to slower grass growth, typically when soil temperatures are at or below 6°C. **SurpassPRO** can be applied using vehicle mounted hydraulic sprayers, as well as via knapsack equipment.

Maximum number of treatments is four per year.

SurpassPRO is approved for control of :

Fusarium Patch (*Microdichium nivale*)
 Red Thread (*Laetisaria fuciformis*)

User experience also shows that iprodione has efficacy against:
 Dollar Spot (*Sclerotinia homoeocarpa*)
 Brown Patch (*Rhizoctonia spp.*)
 Leaf Spot (*Helminthosporium spp.*)
 Melting Out (*Helminthosporium spp.*)

Applications

Curative - Apply at the onset of disease incidence and repeat as necessary, not less than 1 month apart.

Preventative - Apply monthly, prior to disease outbreak during periods of high or predicted disease pressure.

SurpassPRO can be applied all year round.

Contains 250 g/l (23.0% w/w) Iprodione Mapp No.15368
