Specific hazards	Combustion may yield smoke, oxides of carbon and other products of incomplete combustion. Oxides of sulphur, nitrogen or phosphorus may also be formed. Can be dangerous when exposed to extreme heat and flame. Do not allow water to directly enter storage containers as violent reaction may occur. Responders should consider the need for evacuation based on emitted decomposition products. Flammable hydrogen may be produced on prolonged contact with metals such as aluminium, tin, lead and zinc. Do not breathe mist/vapour/spray.	
Hazardous combustion products	Oxides of carbon. Oxides of sulphur. Oxides of nitrogen. Oxides of phosphorus.	
5.3. Advice for firefighters		
Protective actions during firefighting	Cool containers exposed to heat with water spray and remove them from the fire area if it can be done without risk. Avoid the spillage or runoff entering drains, sewers or watercourses.	
Special protective equipment for firefighters	Wear positive-pressure self-contained breathing apparatus (SCBA) and appropriate protective clothing.	
SECTION 6: Accidental release	e measures	
6.1. Personal precautions, pro	tective equipment and emergency procedures	
Personal precautions	Evacuate area. Wear protective clothing as described in Section 8 of this safety data sheet.
